

ONBOARDING DOCUMENT

About CybrHawk

CybrHawk is a leading provider of cybersecurity solutions, specializing in Security Information and Event Management (SIEM), Extended Detection and Response (XDR), and Security Operations Center (SOC) services

CybrHawk offers a SIEM and XDR platform that collects data from various security sources across your network. This consolidated view allows for comprehensive threat detection, investigation, and analysis. CybrHawk XDR capabilities go beyond traditional SIEM by incorporating endpoint data and user behavior analytics for a more holistic threat picture.

CybrHawk provides a staffed SOC with security analysts and experts who continuously monitor your systems for suspicious activity which includes

- **Detect threats:** Utilize the SIEM/XDR platform and their expertise to identify potential security incidents.
- **Investigate:** Deep-dive into detected threats to determine their scope and potential impact.
- **Respond:** Take necessary actions to contain and remediate threats, minimizing damage.
- **Threat Hunting:** Proactively search for hidden threats within your network infrastructure.
- **Incident Response:** Provide guidance and support during security incidents to ensure a swift and effective response.

Benefits of CybrHawk:

- **Improved Threat Detection:** Consolidated SIEM/XDR platform provides a broader view for identifying sophisticated cyberattacks.
- **Enhanced Security Posture:** 24/7 monitoring and expert SOC team help you stay ahead of evolving threats.
- **Reduced Response Time:** Faster detection and investigation lead to quicker and more effective incident response.
- **Streamlined Security Operations:** Unified platform and SOC services reduce complexity and improve security efficiency.

This template provides a general framework for onboarding a new XDR (Extended Detection and Response) solution.

PRE-ONBOARDING

- Discovery & Planning
- Define security goals and desired outcomes for XDR implementation
- Inventory endpoints and network devices for agent deployment.
- Identify data sources (firewalls, security tools, etc.) for integration
- Understand user roles and access control requirements.
- Establish a clear communication plan with all stakeholders (IT, Security, etc.).
- Schedule onboarding meetings and workshops with the XDR vendor
- Communication & Coordination

ONBOARDING: ACCOUNT SETUP & CONFIGURATION

- Activate your XDR tenant and configure user roles and permissions
- Review and configure XDR settings (e.g., data retention, alert thresholds)
- Set up authentication methods (local login, SAML SSO)

AGENT DEPLOYMENT:

- Define endpoint groups for targeted deployment and policy application.
- Customize security profiles for endpoint protection and data collection.
- Deploy XDR MSI agents to endpoints according to your chosen strategy (manual, automated).
- Monitor agent health and ensure proper communication with the XDR platform.

CLOUD MONITORING

- O365 Onboarding, API:
- Google Workspace:
- AWS Cloud Integration:
- Tracks user logins, DLP and more:

DATA SOURCE INTEGRATION:

- Configure integrations with firewalls, security tools, and other data sources
- Ensure proper sys log format compliance for XDR ingestion
- Test data flow from integrated sources to verify successful ingestion

NETWORK DETECT & RESPONSE : NDR SENSOR

- Deploy Network sensor which track east west and north south traffic.
- Improved Security Posture
- Enhanced visibility
- Forensic Analysis
- Faster Response Time
- Zero day Detection

THREAT DETECTION & RESPONSE:

- Review and customize out-of-the-box detection rules and analytics settings.
- Configure automated responses for identified threats (e.g., isolation, blocking).
- Define escalation procedures for security incidents detected by XDR.

POST-ONBOARDING: TRAINING & USER ADOPTION

- Provide training for security personnel on XDR functionality and incident response.
- Encourage user adoption by showcasing the benefits of XDR for threat detection.

ONGOING OPTIMIZATION:

- Regularly review and refine detection rules based on real-world data and security trends.
- Monitor system performance and adjust resource allocation as needed
- Leverage XDR reporting and analytics to identify security gaps and improve overall posture.
